

DIGIHEALTH PROJECT

Micro-credentials in Digital Health for Ethiopia and Somalia

Empowering the Future of Healthcare through Digital Innovation

About the Project

DigiHealth is an Erasmus+ project that strengthens healthcare education in Ethiopia and Somalia through micro-credentials in digital health, offering flexible training to boost skills, access, and innovation in the health workforce.

 Project Reference Number:
101179425

 Duration: 2024-2027

 Website:
<https://dighealthproject.org/>

Project Objectives

- Develop digital health curricula using micro-credentials.
- Train staff and build institutional capacity.
- Enhance healthcare access with digital tools and telemedicine.
- Promote collaboration among universities, hospitals, NGOs, and policymakers.

Why Digital Health?

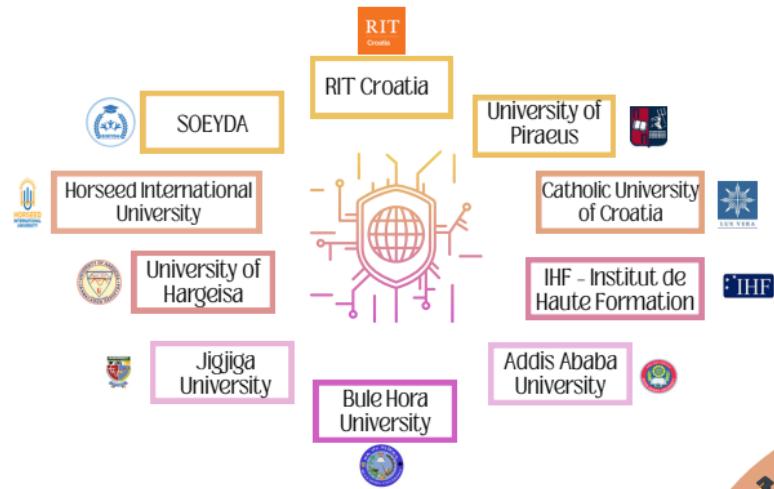

Healthcare access in Ethiopia and Somalia is limited by geography, infrastructure, and staff shortages. DigiHealth addresses this through digital health training, enabling remote care, smart data use, and digital patient support.

the European Union

Meet the Consortium

Expected Results

Capacity Building

- 86+ academic staff trained across Ethiopia and Somalia
- 125+ students enrolled in pilot micro-credential programs
- Memoranda of Understanding signed with regional hospitals for internships

Training Materials & Curricula

- 3 modular courses (30 ECTS) in digital health
- Dual focus on IT and healthcare content
- Delivered via blended and online formats

Long-Term Impact

- Establish national and regional digital health hubs
- Gain recognition of micro-credentials by authorities
- Boost employability and digital skills of health professionals
